This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- A finite element model for cyclic tangential loading in pre-sliding is developed.
- The finite element model is for the contact between a power-law hardening sphere and a rigid flat.
- The contact parameters in the cyclic tangential loading process are obtained.
- The effects of power-law hardening exponents on contact parameters are studied.
