A stress-state-dependent continuum damage model for concrete based on irreversible thermodynamics

Michael Brüning, Alexander Michalski

PII: S0749-6419(16)30325-4

DOI: [10.1016/j.ijplas.2016.12.002](https://doi.org/10.1016/j.ijplas.2016.12.002)

Reference: INTPLA 2133

To appear in: *International Journal of Plasticity*

Received Date: 26 July 2016

Revised Date: 5 October 2016

Accepted Date: 10 December 2016

Please cite this article as: Brüning, M., Michalski, A., A stress-state-dependent continuum damage model for concrete based on irreversible thermodynamics, *International Journal of Plasticity* (2017), doi: 10.1016/j.ijplas.2016.12.002.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A new continuum damage model for concrete is presented.
- The model is able to reproduce elastic stiffness degradation.
- The model is able to simulate irreversible deformations and irreversible volume increase under compression loading.
