

Accepted Manuscript

A rate and temperature dependent unified creep-plasticity model for high strength steel and solder alloys

Xu He , Yao Yao , Leon M. Keer

PII: S0167-6636(16)30138-7
DOI: [10.1016/j.mechmat.2017.01.005](https://doi.org/10.1016/j.mechmat.2017.01.005)
Reference: MECMAT 2687

To appear in: *Mechanics of Materials*

Received date: 9 July 2016
Revised date: 19 October 2016
Accepted date: 9 January 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The temperature effect on strain rate sensitivity of different metals and alloys is investigated.
- An analytical method is proposed to simulate the change of material rate sensitivity as a function of temperature.
- The temperature function, drag stress evolution function and the adjustment equations can be determined.
- Compared with the experimental data, the proposed method can accurately describe the strain rate sensitivity at different temperatures.
