This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- A new multi-notched flexure hinge for compliant mechanisms is proposed.
- The configuration of the multi-notched hinge is obtained by using topology optimization.
- The final model of multi-notched flexure hinges is developed by post-processing technical after topology synthesis.
- The dimensionless empirical equations for stiffness, rotational precision and stress of the multi-notched flexure hinges are established based on the FEA results.
- Comparisons of the multi-notched hinges with other flexure hinges are performed in terms of stiffness, rotational precision and stress levels.
