Accepted Manuscript

Cost-effective fire protection of chemical plants against domino effects

Nima Khakzad , Gabriele Landucci , Valerio Cozzani , Genserik Reniers , Hans Pasman

PII: S0951-8320(16)30168-5
DOI: 10.1016/j.ress.2017.09.007
Reference: RESS 5945

To appear in: *Reliability Engineering and System Safety*

Received date: 21 June 2016
Revised date: 31 July 2017
Accepted date: 22 September 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Effect of fire protection systems on domino scenarios has been modeled using a Bayesian network technique.
- Optimal allocation of fire protection systems has been performed by extending the Bayesian network to an influence diagram.
