Application of Systems Theoretic Process Analysis to a Lane Keeping Assist System

Haneet Singh Mahajan , Dr. Thomas Bradley ,
Dr. Sudeep Pasricha

PII: S0951-8320(16)30972-3
DOI: [10.1016/j.ress.2017.05.037](https://doi.org/10.1016/j.ress.2017.05.037)
Reference: RESS 5857

To appear in: *Reliability Engineering and System Safety*

Received date: 13 March 2017
Revised date: 10 May 2017
Accepted date: 24 May 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A case study of systems theoretic process analysis is presented
- Hazard identification and requirements development during concept development stage
- Inclusion of human-machine interface in hazard analysis
- Safety analyses for complex, software-intensive systems
