Reliability based design optimization with approximate failure probability function in partitioned design space

LIU Wang-Sheng , CHEUNG Sai Hung

PII: S0951-8320(16)30081-3
DOI: [10.1016/j.ress.2017.07.007](https://doi.org/10.1016/j.ress.2017.07.007)
Reference: RESS 5904

To appear in: *Reliability Engineering and System Safety*

Received date: 29 May 2016
Revised date: 2 July 2017
Accepted date: 10 July 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A novel framework for simulation based RBDO
- Efficient decoupling by constructing failure probability functions
- Design space is partitioned iteratively from high to low density regions for accurate approximation
- Combination of binning and regression for flexible probability density estimation
