This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## GRAPHICAL ABSTRACT

With the guide of computer program for 3D printing, the PDMS porous films can be printed with versatile special surface wettabilities such as anisotropic wettability and superhydrophobicity, and show attracting applications in air-breathable water-proofing, water-repellent floating carrier, and no-loss liquid transfer.
