Effects of carbon fiber content and size on electric conductive properties of reinforced high density polyethylene composites

Ji-Zhao Liang, Quan-Quan Yang

PII: S1359-8368(16)32882-7

DOI: [10.1016/j.compositesb.2017.02.017](https://doi.org/10.1016/j.compositesb.2017.02.017)

Reference: JCOMB 4900

To appear in: *Composites Part B*

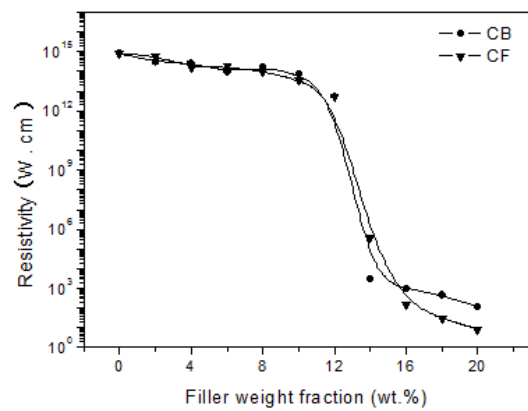

Received Date: 29 November 2016

Accepted Date: 11 February 2017

Please cite this article as: Liang J-Z, Yang Q-Q, Effects of carbon fiber content and size on electric conductive properties of reinforced high density polyethylene composites, *Composites Part B* (2017), doi: 10.1016/j.compositesb.2017.02.017.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The variation of the resistivity with the filler weight fraction for the HDPE/CF composites and HDPE/CB composites is roughly similar.
