## Abstract

The kinetics model for multi-component diffusion DICTRA was applied to analyze the formation and retainment of  $\delta$ -ferrite during solidification and cooling of GX4-CrNiMo-16-5-1 cast supermartensitic stainless steel. The obtained results were compared with results from the Schaeffler diagram, equilibrium calculations and the Scheil model in Thermo-Calc, and validated by using microscopy and Energy Dispersive X-ray Spectroscopy for chemical analysis on a cast ingot. The kinetics model showed that micro-segregation from solidification homogenizes within 2 - 3 s (70 °C) of cooling, and that retained  $\delta$ -ferrite originates from the incomplete transformation to austenite. The kinetics model predicted the measured amount of  $\delta$ -ferrite and the partitioning of Cr and Ni reasonably well. Further, it showed that slower cooling for the investigated alloy leads to less retained  $\delta$ -ferrite, which is in excellent agreement with experimental results.

## 1 Introduction

Since the 1960s, when supermartensitic stainless steels were developed, this type of alloys has found increasing use in many industries [1,2]. Specifically in the offshore oil and gas industry such alloy grades were introduced in the 1990s [3]. Supermartensitic stainless steels combine high strength, good toughness as well as reasonable weldability, and they achieve good corrosion performance with relatively low alloy content [4,5].

The optimal properties of the material, extensively described in Refs. [2,6,7], are obtained by normalizing, leading to martensite transformation, followed by tempering in the inter-critical temperature region, in which both austenite ( $\gamma$ ) and ferrite ( $\alpha$ ) are thermodynamically stable. The tempering treatment leads to formation of reversed austenite in a finely dispersed lamellar morphology on grain boundaries of lath martensite. This is accompanied by diffusion of austenite stabilizing elements into austenite, which stabilize this phase to room temperature [8–13]. Since the good
