Abstract

In this paper, an adaptive control scheme is developed to study the dual anti-synchronization behavior between two chaotic systems with fully uncertain parameters. This adaptive anti-synchronization controller is designed based on Lyapunov stability theory and an analytic expression of the controller with its adaptive laws of parameters is shown. The adaptive dual anti-synchronization between two chaotic systems are taken to show the effectiveness of the proposed method. Theoretical analysis and numerical simulations are shown to verify the results.

Key words:

Dual anti-synchronization; Adaptive control; Uncertain parameters; Lyapunov stability theory.
