This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

A new measure of trip risk integrating minimum foot clearance and dynamic stability across the swing phase of gait

Brian W. Schulz, PhD*

VA Office of Research and Development, Washington, DC

Keywords: minimum toe clearance; irregular floor; obstacles; tripping; older adults; fallers; dynamic stability

Abstract word count: 250/250

Article word count: 3,874
