This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## ACCEPTED MANUSCRIPT

- An agent-based macroeconomic model with banks is developed, calibrated and simulated
- Banks improve macro performance by financing new and existing trading firms
- The model normally tracks full capacity utilization closely but it occasionally becomes unstable
- In these bad times the economy performs better when banks are lightly regulated
