This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We examine how determinants of the political risk factor affect stock returns
- We analyze three market categories (developed, emerging and frontier stock markets)
- Government action is common source of political risk in all market categories
- Source of political risk that is unique to frontier markets is government stability
