Please cite this article in press as: Bergantiños, G., et al. Loss allocation in energy transmission networks. *Games Econ. Behav.* (2016), <http://dx.doi.org/10.1016/j.geb.2016.10.012>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This paper focuses on the allocation of losses in energy transmission networks.
- Different allocation rules are discussed.
- We compared them with respect a set of principles set forth by the European Union.
- Axiomatic characterizations of two of the rules are provided.
- The findings are illustrated on the Spanish gas transmission network.
