This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We model dynamic project selection with commitment of uncertain duration.
- Leader rejects projects that follower selects, as firms benefit from a busy rival.
- Monopolist selects less projects, but with higher quality compared to the duopolists.
- Duopolists select too few projects compared to their jointly optimal behavior.
- We extend the model to allow for externalities, asymmetry, and $n > 2$ firms.
