This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The paper studies optimal pricing issues for a multiproduct monopolist.
- A continuum of consumers have additive and correlated private valuations for the monopolist's two products.
- We derive closed-form optimal pricing schemes and comparative statics results for the monopolist.
- Correlation and support asymmetry are both important in determining the optimal pricing schemes. The negative correlation setting is more favorable for the monopolist.
- The optimal (deterministic) pricing scheme can also be improved in profit using random mechanisms.
