Production and hedging with optimism and pessimism under ambiguity *

Donald Lien[†] Chia-Feng (Jeffrey) Yu[‡]

April 11, 2017

Abstract: This paper analyzes the optimal production and hedging decisions of a competitive firm holding optimism and pessimism under price ambiguity. We show that the separation theorem remains intact as the firm's optimal output level depends neither on the output price distribution nor on the firm's preferences. Furthermore, the validity of the full-hedging theorem depends on the extent to which the firm is optimistic about the uncertain output price. Notably, we identify a threshold of the firm's optimism level above which it is never optimal for the firm to full-hedge even when an unbiased hedging opportunity is available. Our results suggest how a firm's optimism level and ambiguity degree affect its production and hedging behavior and provide a novel explanation for why firms in practice shy away from full-hedging.

Keywords: Production, Hedging, Ambiguity, Optimism, Pessimism.

JEL Classification Numbers: D21, G02, G32.

*We are very grateful to anonymous referees, Sigitas Karpavicius, Birendra Rai, Keith Wong, Jason Yeh, and seminar participants at the 23rd Conference on Theories and Practice of Securities and Financial Markets for their helpful comments. All remaining errors are our own. Part of the paper was completed when Donald Lien was Weilun Visiting Professor at Institute of Economics, Tsinghua University, and the Institute's hospitality is deeply appreciated.
