This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Recommendations and mandates significantly increased hepatitis A vaccination rates.
- These policies also significantly reduced population hepatitis A incidence.
- Effects of ACIP recommendations and mandates differ along several dimensions.
- Unique hepatitis A policy features allows for credible estimation of these effects.
- Uses difference-in-difference models, exploiting variation in state policy timing.
