This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A speculator and an authority are added to a benchmark global game model.
- The speculator can make the financial system more vulnerable by triggering a crisis.
- Three speculator-counteracting intervention policies are investigated and compared.
- Policies used during 1997 Asian financial crisis are linked to theoretical results.
