This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- U.S. economy-wide real wage varied little over 1929-33
- Real wages rose significantly in some industries, and fell in others
- Contractionary monetary shocks and nominal wage rigidities account for a third of U.S. GDP contraction over 1929-33
- Intermediate linkages mitigate impact of sectoral wage rigidities in two-sector model
