February 16, 2017

Abstract

This paper explores the economic costs of conflict using a unique experiment. We analyze the effects of Hezbollah's massive surprise rocket attack against northern Israel during the 2006 Second Lebanon War and the continued threat posed by the organization's expanding rocket arsenal on the housing market, the labor market and patterns of migration flows and sorting. Relying on hedonic and repeat sales approaches and using a difference-in-differences identification strategy for 2000-2012, we show that the attack led to a 6-7 percent decline in house prices and rents in the most severely hit localities relative to other localities in

*We thank the editor, Stuart Rosenthal, two anonymous reviewers, John Cotter and audiences at the Bank of Israel, Bar Ilan University, Ben Gurion University, ETH Zurich, Hebrew University, I-CORE, IDC Herzliya, Israel Democracy Institute, the Israeli Economic Association Meeting, the Israeli Real Estate and Urban Economics Symposium, NBER Summer Institute 2016, Tel Aviv University, and the University of Warwick for valuable comments. We are grateful to Adi Ben-Nun from the GIS lab at the Hebrew University and to Yafit Alfandari, Mark Feldman and Doron Sayag from the Israeli Central Bureau of Statistics for their help with the data, to Neelie Ben-Tovim for research assistance and to the I-Core Program of the Planning and Budgeting Committee at the Israel Science Foundation (grant no. 1821/12) and The Maurice Falk Institute for Economic Research in Israel for financial support. The views expressed in this paper are those of the authors and do not necessarily reflect the position of the Bank of Israel.
