This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights:

- Cross correlation between two feet of human gait
- Data for control group, Parkinson's disease and Huntington's disease is analysed
- Cross correlations can provide better insight to the subject compared to autocorrelation
- Normal gait rhythm is more severely affected in case of Huntington's disease compared to Parkinson's.
