This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Paper highlights:

- Expansion of mean value models of queuing systems
- Application of modified stretched exponential to limited system resources
- Obtained results are based on experiment and operating system tracing during man-machine interaction
- Confirmation that exponentially truncated q-distribution can be used in modelling behavior of man-made systems
