This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

***Highlights (for review)**

Highlights of paper:

We propose a local unsupervised network cluster framework that works well also for communities of different densities and/or sizes.

The proposed community detection algorithm integrates more different measures that define good communities.

The proposed algorithm is a fast local expansion algorithm for uncovering communities of different sizes and densities.

It reveals rich information on input networks.
