This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A stochastic epidemic model with specific functional response and temporary immunity is formulated and rigorously analyzed.
- The well-posedness of the model is mathematically and biologically proved.
- The extinction of the disease is established.
- Sufficient conditions for the persistence in the mean are obtained.
