This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHTS

- We describe most important pair trading strategies used in financial markets.
- We introduce Hurst exponent as a pair trading strategy.
- An empirical application of our strategy is done and compared with classical ones.
- Results prove that pair trading strategy based on Hurst exponent is superior for different pair combinations to the classical ones.
