Diffusion of phonons through (along and across) the ultrathin crystalline films

J.P. Šetrajčić, S.K. Jaćimovski, S.M. Vučenović

PII: S0378-4371(17)30642-8
DOI: http://dx.doi.org/10.1016/j.physa.2017.06.003
Reference: PHYSA 18388

To appear in: *Physica A*

Received date : 20 January 2017
Revised date : 31 May 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- The momentum-momentum Green's functions were used to calculate the diffusion tensor.
- These functions enter into Kubo's formula defining diffusion properties of the system.
- Boundary conditions are included through the Hamiltonian of the film-structure.
- The elements of the diffusion tensor express discrete behavior of the dispersion law
- The diffusion tensor elements are temperature independent.
