This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- The interface area of solid tumours with normal tissue displays marked fluctuations.
- Heuristic arguments suggest that the fluctuations have a lognormal distribution.
- We utilize metabolic growth data to obtain the magnitude of the fluctuations.
- Our statistical analysis strongly supports the lognormal conjecture.
