This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Research highlights

- We test the Adaptive Markets Hypothesis in the Chinese stock markets.
- The return predictability and the risk-premium relation vary over time.
- The trading strategies based on contrarian portfolios wax and wane over time and are dependent on market conditions.
- Our findings support the Adaptive Markets Hypothesis.
