Effect of self-interaction on the evolution of cooperation in complex topologies

Yu'e Wu, Zhipeng Zhang, Shuhua Chang

PII: S0378-4371(17)30333-3

DOI: <http://dx.doi.org/10.1016/j.physa.2017.04.030>

Reference: PHYSA 18132

To appear in: *Physica A*

Received date: 30 December 2016

Revised date: 16 March 2017

Please cite this article as: Y. Wu, et al., Effect of self-interaction on the evolution of cooperation in complex topologies, *Physica A* (2017), <http://dx.doi.org/10.1016/j.physa.2017.04.030>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- ▶ A new self-interaction mechanism in the prisoner's dilemma and the snowdrift games is proposed.
- ▶ The evolution of cooperation is elevated to a very high level.
- ▶ The promoting effects are independent of the structure of the applied spatial networks and the potential evolutionary games.
