This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

***Highlights (for review)**

- This paper proposes a new time series link prediction for social networks.
- The proposed method is based on learning automata
- The proposed method uses time series information of the social network and different similarity metrics to predict future links
