This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Effective neuronal connectivity activated by manual acupuncture is reconstructed.
- Relationship between neuronal synchrony and effective connection is investigated.
- Variation of effective connectivity with respect to structural connection is explored.
- Time delay induces intermittent transitions of synchrony and causal interactions.
