This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Introduce the information entropy as the measurement of the relationship between nodes including direct and indirect neighbors.
- Propose a new belonging coefficient to describe the weight of the label.
- A new method to detect community structures in complex networks.
- The performance and stability in community detection are highly improved.
