This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Protein contact networks (PCN) have a characteristic Laplacian spectral density
- We defined a procedure to generate networks with the same spectral density
- The new networks (LMGRS-GEN) are topologically similar to PCN
- Short-range eigenvalues correlations of LMGRS-GEN are compatible with PCN
