

## Accepted Manuscript

Collective motion of groups of self-propelled particles following interacting leaders

B. Ferdinandy, K. Ozogány, T. Vicsek

PII: S0378-4371(17)30277-7

DOI: <http://dx.doi.org/10.1016/j.physa.2017.03.025>

Reference: PHYSA 18091

To appear in: *Physica A*

Received date : 10 September 2016

Revised date : 19 December 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Collective motion model of SPP-s in two-level hierarchy is investigated.
- Model reproduces key features of wild horse herd movement on open ground.
- Spatial-based interactions produce different group size distribution than observed.
- More complex social topology, than spatial must be involved in group formation.
