This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We examined the distribution dynamics of city size in China.
- Multimodality and persistence are the dominant characteristics in the distribution dynamics of Chinese prefectural cities.
- Initial city size matters in the following city size growth.
- Locational fundamentals have important impact on the distribution dynamics of city size.
