This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- We investigate the robustness of 33 real-world metro networks.
- Robustness metrics capture two distinct aspects of metros.
- Radar diagrams assess overall robustness by incorporating ten individual robustness metrics.
- Tokyo is a robust metro thanks to transfers both in the city centre and the peripheral area.
