This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights for review

- Abnormal investor attention of SSE 50 Index component stocks is power-law correlated.
- There are positive correlations between abnormal investor attention and trading volume, volatility respectively.
- The correlations for trading volume are in general higher than the ones for volatility.
