This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- A fractal impurity network is introduced into a 2D Lebwohl-Lasher lattice model.
- A random network affects nematic ordering much stronger than the fractal network.
- Nematic coherence length depends on the fractal dimension of the impurity network.
