This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights: Pro-poor growth in East Africa

- most of the spells were poverty reducing (positive growth with poverty reduction)
- in most of such spells, the poor benefited less from growth than the non-poor
- the only case of a relative pro-poor growth was identified in Rwanda in 2005–2010
- poorest population benefited generally less than those closer below the poverty line
- Tanzania, followed by Uganda and Rwanda, achieved the highest poverty reduction
