This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

POACHING AND THE DYNAMICS OF A PROTECTED SPECIES

Highlights:

- We develop a bioeconomic model of open access poaching.
- We examine the effects of policy parameters on harvest and population dynamics for broad spectrum of protected species.
- Identify critical parameter values that abruptly change population dynamics.
- Model reveals several counterintuitive conservation policy outcomes.
- Stability analysis conducted for open access resource system.
