This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- SPME-GC/MS was adopted for the chemical analysis of *Salvadora persica*.
- A total of 21 volatile and 75 primary metabolites were identified
- PCA and OPLS were used to classify samples.
- Effect of salivation on *S. persica* volatiles profile was attempted
