Title: Membrane permeabilization induced by Triton X-100:
the role of membrane phase state and edge tension

Author: Bruno Mattei Rafael B. Lira Katia R. Perez Karin A.
Riske

PII: S0009-3084(16)30158-X
DOI: <http://dx.doi.org/doi:10.1016/j.chemphyslip.2016.11.009>
Reference: CPL 4508

To appear in: *Chemistry and Physics of Lipids*

Received date: 7-11-2016
Revised date: 28-11-2016
Accepted date: 28-11-2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Membrane permeabilization induced by Triton X-100: the role of membrane phase state and edge tension
