Ultrasonic irradiation of low intensity with a mode of sweeping frequency enhances the membrane permeability and cell growth rate of *Candida tropicalis*

Guoping Huang, Yingxiu Tang, Ling Sun, Huan Xing, Haile Ma, Ronghai He

PII: S1350-4177(17)30062-7
DOI: <http://dx.doi.org/10.1016/j.ultsonch.2017.02.010>
Reference: ULTSON 3547

To appear in: *Ultrasonics Sonochemistry*

Received Date: 11 November 2016
Revised Date: 9 February 2017
Accepted Date: 10 February 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Full title: Ultrasonic irradiation of low intensity with a mode of sweeping frequency enhances the membrane permeability and cell growth rate of *Candida tropicalis*

Short title: Ultrasonic irradiation of low intensity enhances the cell growth rate

Key words: Ultrasound; *Candida tropicalis*; Cell growth; Intracellular calcium ions concentration; mRNA expression profiles

The authors declare no conflict of interest.
