Reactivity of organoplatinum complexes containing appended alcohol functional groups: Activation of dioxygen and hydrogen peroxide

Kyle A. Thompson, Connor Kadwell, Paul D. Boyle, Richard J. Puddephatt

PII: S0022-328X(16)30531-9

DOI: [10.1016/j.jorganchem.2016.11.027](https://doi.org/10.1016/j.jorganchem.2016.11.027)

Reference: JOM 19712

To appear in: *Journal of Organometallic Chemistry*

Received Date: 27 October 2016

Revised Date: 17 November 2016

Accepted Date: 18 November 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Title page abstract

The hydroxyalkyl substituent in the the platinum(II) complexes [PtMe₂(RN=CH-2-C₅H₄N)], when R = CH₂CH₂OH or CH₂CH₂CH₂OH, can play an important role in oxidative addition and in the activation of dioxygen.
