Title: A Kinetic Model of the Gelation of Konjac
Glucomannan Induced by Deacetylation

Authors: Ching-Feng Mao, Cheng-Ho Chen

PII: S0144-8617(17)30208-4
DOI: <http://dx.doi.org/doi:10.1016/j.carbpol.2017.02.078>
Reference: CARP 12057

To appear in:

Received date: 11-9-2016
Revised date: 14-2-2017
Accepted date: 20-2-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

A Kinetic Model of the Gelation of Konjac Glucomannan Induced by Deacetylation

Ching-Feng Mao*, and Cheng-Ho Chen

Highlights

- The gelation of konjac glucomannan exhibits an induction period.
- A kinetic model was proposed for the induction period.
- Modulus evolution during gelation was described by the kinetic model with the help of a cascade formalism.
- The kinetic parameters were extracted from experimental data.
