This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Preparation and characterization of regenerated cellulose films using borassus fruit fibers and an ionic liquid

Research Highlights

- For the first time, RCF with obtained cellulose from Borassus palm fruit fiber was prepared in AmimCl.
- The regenerated cellulose film possessed homogeneous structure
- An added value of an agro-waste material through its reuse was established
