This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Graphical Abstract

Mn(II), Co(II), Ni(II) and Cu(II) complexes containing iminodiacetate as primary and 2,2'-bipyridine as auxiliary ligand have been synthesized and characterized by spectral and single crystal X-ray studies. The biological activities of the present complexes are also assessed.
