Synthesis, Structure Characterization and Biological Activity of Selected Metal Complexes of Sulfonamide Schiff Base as a Primary Ligand and some Mixed Ligand Complexes with Glycine as a Secondary Ligand

Carmen M. Sharaby, Mona F. Amine, Asmaa A. Hamed

PII: S0022-2860(16)31389-8  
DOI: 10.1016/j.molstruc.2016.12.070  
Reference: MOLSTR 23268  
To appear in: *Journal of Molecular Structure*  
Received Date: 20 October 2016  
Revised Date: 20 December 2016  
Accepted Date: 23 December 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

1. Novel organic ligands have been synthesized and structurally characterized
2. Selected metal complexes of the prepared organic ligands have been prepared
3. Biological activity studies for all novel prepared compounds have been carried out
4. Results showed promising microbial and anticancer activities of prepared compounds
